

FOREIGN NEWS.

Shocking Accident—Four Cars in Collision—European Libraries.

A shocking accident which terminated fatally, occurred at Calais recently. It happened on the morning of the 10th inst. at that side of the beach where the practice is carried on of firing over an unexploded shell, which she struck with a shot, mauling the child in such a manner that she died on being removed to the hospital. The child's body was covered with wounds.

A girl which died lately near Calais is believed to have been killed. The owner had for several days suspected that it was dying from away from the house, but he did not know it. The girl was driven from the house, having been taken to the river, and was seen afterwards it was seen running towards the river, and into which it plunged head foremost. When it appeared on the surface, it was dead.

In one town of Saxony during three months of last year 400 persons were attacked with trichinosis, and of these 100 died. The cause of the disease responsible for this epidemic is not given, but Dr. Van Arman, who has been in charge of the epidemic, says that all those who died each one had eaten the same in a raw uncooked state. The cause of the disease was not revealed until the following day, when the sausage-meat balls, which had only been partly cooked, were found to contain pieces of meat or less part of the sausage.

Local cases are not in much esteem among the English public. When they first come out there was no disposition to give them a trial. The cause of the disease was not revealed until the following day, when the sausage-meat balls, which had only been partly cooked, were found to contain pieces of meat or less part of the sausage.

A painful feeling has been produced in Vienna by the disappearance of a son of the well-known Dr. Baumgartner, a student of 21. The doctor has been unable to find out the probability that he has lost his life in the Syrian Alps. The doctor has been unable to find out the probability that he has lost his life in the Syrian Alps.

A strange story of outrage on a Jew comes from France. A Frenchman left Paris for Berlin in order to attend his brother's wedding, and being ignorant of French, was unable to understand a demand made for him to be taken to a station in the neighborhood of Paris. The railroad employee finally told him that he was to be taken to a station in the neighborhood of Paris.

The number of vessels totally lost or on the coast of the United States during the five years, 1872-76, was, according to the report of the committee on commerce, 4,480, or nearly 100 per annum, with a loss of life equal to nearly 750 per annum. This returns take account of missing ships and crews, but the committee does not find that the figures show any material improvement which can be attributed to the increased accommodation during the last twenty-five years; but they are of opinion that there is on certain parts of the coast a loss of property and life which would undoubtedly be reduced by an increase in the number of vessels in all states of the tide.

Of all out-of-the-way modes of earning a living, perhaps the most curious is that which is flourishing in the city of Genoa, being disinfected. Some open-eyed Genoese are in the habit of taking return tickets to some station just out of the city, where they join the trains from France, and detailing to the passengers the horrors of the compulsory disinfection, and the danger of returning to the city, and the danger of returning to the city.

The following extraordinary circular, which has recently been issued at St. Petersburg by the department of roads and communications, curiously illustrates the reverence with which the czar and all his belongings are regarded by the Russians. The owners of passenger steamers who have been granted permission to name their vessels after the czar, the imperial family are bound to keep their boats in excellent order and repair. If, however, any passenger steamer, consequent upon commercial operations, should be employed in any manner likely to make the carrying of the above instructions difficult, the owners are hereby notified that they must re-name the vessel and declare this change of name to the inspector of marine.

Eight millions sterling—that is the amount of unclaimed claims for compensation in Chancery. What strange form of human folly of laying up riches for the moth and the rust, and of storing up and unutilized riches, those yellow papers in the record office could disclose. There is the account of John Hardcastle, convicted of felony—had he no nose to feel for the gold he had hidden away? He had no nose to feel for the gold he had hidden away?

The Queen owns all the property at Windsor Castle, just as the duke of Marlborough owns all the property at Blenheim. The Queen owns all the property at Windsor Castle, just as the duke of Marlborough owns all the property at Blenheim.

FROM CASH-BOX TO CAPITALIST.

The Career of Cyrus W. Field, the Transatlantic Cable.

The celebration of the laying of the first Atlantic cable has long been eclipsed by grander pageants, and the cable is now a thing of the past. The cable is now a thing of the past. The cable is now a thing of the past.

A Dreadful Execution. A ghastly scene occurred lately within the prison at St. A. A convicted man, who had been in the prison for months, was executed. The execution was a ghastly scene.

Rejected Negro Teachers. At the examination of colored applicants for positions as teachers in the public schools, two weeks ago, some of the questions were very peculiar. The questions were very peculiar.

Betting Among Women. The New York *Hour*, in an editorial article on "Betting Among Women," says that the habit of betting is not confined to New York, but is a general one.

A Female Syrian Masher. I took my seat next to some high-toned ladies, who were much conversational. The ladies were much conversational.

SCIENTIFIC CODES

SCIENTIFIC GOSSIP.

Small estimates the quantity of laminated springs at present required on the Irish, Scotch, and Welsh railways at 920 tons, and of the 12,000 tons annually used Sheffield gives about 10,000 tons.

proposed to be held in London in the Iron Age. "We can only assert we heartily wish success to the efforts of the promoters of this novel exhibition."

Mr. Rouire has projected the conversion of the Shott Melgair into an inland sea by means of a canal 145 miles long communicating with the Mediterranean, but E. Cosson regards as chimerical this scheme of making a marine basin in Algeria and Tunisia.

At the late annual meeting of the Royalty of New South Wales the Clarke Medal for the year 1894 was awarded to Alfred R. C. Selwyn, in recognition of his scientific labors in Great Britain as Director of the Geological Surveys of Canada and of Victoria.

Three cents an hour for each Jahloch.

handle having been found inefficient meet the running expenses after a trial run over five and a half years, the company suppling that method of electric lighting have discontinued to employ in the Thames (Victoria) Embankment, London.

M. J. Carpenter claims that as far back January, 1881, he constructed an apparatus similar to the mercurial galvanoscope recently presented to the Academy of Sciences, Paris, and that he experimented with it before witnesses long before the description of the instrument by Lippmann.

In a letter from Perak the Rev. J. E. Wilson-Woods gives a long account of scientific experiences in the Malacca Peninsula. He had examined the rich mines of the settlement and the geological features.

M. P. Calliburgos passed a current of purified air at ordinary temperatures, or 25 C., through 32.8 pints of grape juice. The fermented liquor obtained was perfectly clear and free from cotton-like sediment when examined after the lapse of six months. It contained 18.40 per cent. alcohol by volume.

A sunshine recorder made by placing a lens in front of an old camera box was recently exhibited by Prof. Herbert M. Sargent before the Physical Society, London. Sensitized paper is placed in the bottom of the box so that the focused sunbeams strike on it, as the sun moves, and traces a curved line of band on the pa-

the close of a paper by Mr. W. H. one in the physiological bearing of electricity to the health there was suggested as made as to the therapeutic uses of electric electricity, administered, not as a, hap-hazard, but quantitatively and scientifically, might be put, classifying such as muscular, sensory, neurotic, eliminative, and vaso-motorial.

Miss Sophia Bryant, mathematical student of the North London Collegiate school for Girls, and daughter of the late Dr. W. A. Wilcock, sometime Registrar, Cleinsish, Enniskillen, and Fellow Trinity College, Dublin, is the first lady to obtain the degree of D. Sc. from the University of London. She continues her duties as teacher while she was working for her degree.

Experiments on an extending and heat-

made by the Dutch Government to ascertain the relative strength of iron and steel girders. The soft steel girders proved to be 22 per cent. and the hard steel girders 66 per cent. stronger than the iron ones. It was pretty well established that the strength of the steel girders is about the same for the two flanges if they are made alike in section.

pure oxygen and the oxygen as it exists in the atmosphere have been proved by the satisfaction of M. L. Troost capable of passing through the sides of a heated vessel of silver, but that only a mere trace of nitrogen found its way through the metal. It is suggested that pure oxygen might be obtained from the atmosphere by taking advantage of this permeability of silver to oxygen gas, but the metal must be heated above 800° C.

Writing in the *Nature* about cannibalism in snakes, Mr. John Frothingham says: "About eighteen months ago, just prior to my leaving India, at Davalah the Wynad, the horsekeepers chased and killed a large cobra 6 feet 4 inches in length. Previous to its death it was always down in front of the door of our house, when after a good deal of twisting

very contention of the body, it displayed a small rock snake over 4 feet in length. I had heard of this same thing here in India, so I do not think cannibalism in snakes uncommon."

A Bull and a Bloodhound.

Wild Cherokee bull, imprisoned in pen of Mr. Shucknight, was very vicious, just having come through territory. The top of the pen was open and the bull made a dash up it. Two neighboring dogs ran at and he charged upon them, killing with his sharp horns. He then made dash for his neighbor, struck him in head and knocked him into a ditch. drew back for another plunge, but was his impetus that he leaped over the ditch. Two blood-

bul were procured and put in pursuit, but killed one, but the other got by the car, and no amount of shakewould throw him off. He finally ran with the dog still clinging to his neck. Reaching Deersgrass, he plunged into the creek and held his head and the dog beneath the water until he thought water was drowned. When he was able to hold his head under water any longer he brought it up and the dog was there. The bull gave it up, and went to the bank, where he was lassoed and captured. — *Louisville Post.*
